Break Out Box (BOB^e)

Vehicle Network Multi-Access Hub

Overview

- BOB^e™ removes most compatibility issues when multiple devices connect to the vehicle network
- Simple plug and play connection to the OEM chassis through the OBDII or a gateway connector, providing a clean, invisible installation
- Eliminates the challenge of installing multiple harnesses when connecting multiple devices

"We had placed telematics devices into our buses with propane as the fuel source, and it was interfering with the interlock in the buses. With the break out [box] enhanced boards, the vehicles are running smoothly, and we can view all the telematics."

~ Adam Baranski, Livingston Essential Transportation Service (L.E.T.S.)

Features

BOB^e is enhanced with the addition of the InterMotive Safe-T-Net™ product, which:

- Provides five module connections to the vehicle network
- Includes an auxiliary CAN network for third-party devices, minimizing impact on the vehicle network
- Passively acquires vehicle data and passes it to active third-party devices without requiring changes to their modules

Product features may vary by make, model or year. See instructions for complete details.
