

Camera Interface Module

Signal Connection System

Overview

- Provides standard outputs for common signals to interface with camera or CAD/AVL systems. Examples include:
 - Turn signals
 - Service brake
 - Reverse
 - Headlights
 - Park brake set
- Capable of providing chassis signals as well as bus body electrical signals such as “lift in use” or “rear door ajar”

Features

- Standardizes wiring on all buses that have a camera or CAD/AVL system using the FlexTech™ programmable electrical system
- Can be added to an existing bus without any additional programming; connects to FlexTech and starts working automatically
- Harness and connector are provided to attach to a CAD/AVL or camera system
- Includes Intermittent Fault Filter™ (IFF) technology to eliminate false readings

*Product features may vary
by make, model or year.
