

Type C school buses just got an A+ in theft prevention from InterMotive

AUBURN, CALIFORNIA – July 9, 2025

InterMotive Vehicle Controls, a leading manufacturer of electronic control systems, has recently expanded application of its popular anti-theft solution, IdleLock, to include Type C buses.

IdleLock secures the vehicle while it sits idling. The operator can remove the key from the ignition with the Parking Brake applied as the engine continues to run. Critical functions such as lights and HVAC also remain on for passenger comfort. If an attempt is made to move the vehicle without the key in the ignition, IdleLock will shut the engine off.

The system is easily installed using InterMotive's plug-and-play connections to the vehicle with no cutting of factory wires.

For more details, or for other chassis applications, contact InterMotive's master distributor, LGS Group, at 775-831-2002 or go online: <https://intermotive.net/transit-mobility-2/#idle>. In Arizona and Washington, IdleLock systems for Type C buses are distributed by RWC Group. Contact them at 602-377-4401 or thartman@rwcgroup.com.

###

InterMotive Vehicle Controls provides commercial safety and performance optimization products. Our plug and play electronic control systems leverage a vehicle's own data networks to enhance its functions in new ways. We specialize in custom solutions for school bus, transit/paratransit, law enforcement, ambulance, fire truck, work truck, RV and personal-use mobility industries. To learn more, call 800-969-6080 or visit www.intermotive.net.
