

MobiliSafe

Wheelchair Securement Monitoring System

Overview

- Passenger safety system that ensures the wheelchair is immobilized and the passenger is buckled during transport
- Includes a head unit display with visual and audible warnings for the operator
- Compatible with both new and existing mobility vehicles
- Standalone system or optional add-on feature to the SeatLink™ seat belt monitoring system (through Freedman Seating Co.)

Additional Features

- System components include:
 - Object detection sensor mounted on the wall or under a flip seat
 - Seatbelt sensor mounted to the buckle
 - Self-certification button for the tie-downs mounted to the wall
- Head unit display provides easy setup configuration and in-use procedure guides for the operator
- Records and stores securement data in case of an accident

Product features may vary by make, model or year. See instructions for complete details.
