Safe-T-Seat™

Seat Information Tracking (SIT) System

Overview

- Seat reporting system displays and tracks the occupancy and belt status of passenger seats in a vehicle

- System provides audible and visual warnings via a tablet display for the driver

- Tablet records and stores data in case of an accident

Features

- Each seat sensing module communicates wirelessly for up to three seating positions

- Alerts are triggered if:
  - A seat is occupied but the belt is not fastened
  - The belt is fastened prior to the seat being occupied
  - The seat module has a low battery (for non-hard wired systems) or is non-operational

- Alternate battery power option for sensor modules (2+ years battery life)

- Expandable system up to 30 seat sensing modules (90 seats) for larger vehicles

- Includes Intermittent Fault Filter™ (IFF) technology to eliminate false readings

See instructions for complete details.
