ILISP515-A Shift Interlock
2015 - 2018 Ford Transit

Introduction
The ILISP515-A is a wheelchair lift safety interlock which will work with the key on or key off. It will enable the lift when certain vehicle safety conditions are met, and will lock the transmission in Park when the lift is in use (not stowed). Optional Plug & Play harnesses are available for most applications which makes the installation fast and easy.

Installation Instructions

Disconnect vehicle battery before proceeding with installation.

<table>
<thead>
<tr>
<th>IMPORTANT—READ BEFORE INSTALLATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is the installer’s responsibility to route and secure all wiring harnesses where they cannot be damaged by sharp objects, mechanical moving parts and high heat sources. Failure to do so could result in damage to the system or vehicle and create possible safety concerns for the operator and passengers. Avoid placing the module where it could encounter strong magnetic fields from high current cabling connected to motors, solenoids, etc. Avoid radio frequency energy from antennas or inverters next to the module. Avoid high voltage spikes in vehicle wiring by always using diode clamped relays when installing upfitter circuits.</td>
</tr>
</tbody>
</table>

ILISP515 Module
Remove the lower dash panel below the steering column area and find a suitable location to mount the module so that the Diagnostic LED’s can be viewed with the lower dash panel removed. Locate the module in an area away from any high external heat sources (engine heat, heater ducts, etc.). Do not actually mount the module until all wire harnesses are routed and secure. The last step of the installation is to mount the module.
**Data Link Harness Installation**

1. Locate the vehicle OBDII Data Link Connector, mounted below the lower left dash panel.
2. Remove the White OBDII connector from the dash panel by squeezing both sides of the connector. Plug the red connector from the ILISP515-A Data Link Harness into the vehicle’s OBDII connector. Ensure the connection is fully seated and secure with the supplied wire tie.
3. Mount the White pass through connector from the ILISP515-A Data Link Harness in the former location of the vehicle’s OBDII connector.
4. Secure the ILISP515-A Data Link harness so that it does not hang below the lower dash panel.
5. Plug the free end of the Data Link harness into the mating 4-pin connector on the ILISP515-A module.

**LED Display Panel Mounting - Black 4-pin connector**

Locate a suitable position on the dashboard, within view of the driver to mount the LED Display Panel. Ensure that there is open space behind the dash where the panel is mounted. The harness is 40” in length, which is the maximum distance the display can be from the module.

1. Drill a 5/8” hole in the dash where the center of the display will be located.
2. Attach the Black 4-pin connector of the LED Display Panel Harness to the module.
3. Run the other end of the harness under the dash and out through the 5/8” hole.
4. Attach the end to the LED Display Panel. Ensure the panel is level and secure using supplied screws.

**Lift Connections - 8-pin module connector—Optional Plug & Play Lift Harness for Braun and Ricon lifts**

1. Plug the 8 pin connector into the ILISP515-A module.
2. Run the lift harness out to the lift and plug it into the appropriate lift connector:
   - Braun models 9-Pin connector
   - Ricon models 4-Pin connector
3. If the harness includes a control relay integrated into the harness, peel off the 2-sided tape and stick to the lift housing.

**Park Brake Connection**

**Plug & Play Park Brake Harness** - Disconnect the OEM connector from the Park Brake Switch. Plug in the Park Brake T-Harness, and plug in the OEM connector also into the T” harness.
Lift Connections - 8-pin module connector—Blunt cut or (Plug and Play) Harness for Braun and Ricon lifts

The ILISP515-A provides three low true inputs, a high true input, and one 12V, 1 amp output.

If a control relay is needed to power the lift (lift draws more than 1A), a standard rectifier diode (Digikey RL202-TPCT-ND or equivalent), must be installed between pins 85 & 87 of the relay, as shown in the ILISP515-A CAD Blunt Cut drawing.

The following four wires will need to be lengthened, using solder and heat shrink or tape. The blunt-cut (4-wire) harness provides for control connections to the lift as follows:

**Yellow (Yellow)** - Insert this wire into the pin1 8-pin connector and connect it to any source which provides a High True level to enable shift lock. If not using this feature, the wire can be discarded.

**Orange (Green)** - This Vehicle Secure output provides 12V @ 1 amp when it is safe to operate the lift and is to be connected to the lift.

**Ricon Lift:** Connect to pin #2 of the 4-pin lift adapter connector, or if a control relay is used, terminal 86 of the relay.

**Braun Lift:** Connect to pin #6 of the 9-pin lift adapter connector.

**Gray (Black)** – Connect this input to the Lift Stowed Switch. It must have a ground signal with the lift stowed. When lift is not stowed, the vehicle is prevented from shifting out of Park.

**Ricon Lift:** Connect to pin #4 of the 4-pin lift adapter connector.

**Braun Lift:** Connect to pin #9 of the 9-pin lift adapter connector.

**White (White) - Ricon Lift:** Connect the White wire (Lift wake up (GND) input) along with the Orange wire (Vehicle Secure) to pin #2 of the 4-pin lift adapter connector, or if a control relay is used, terminal 87 of the relay.

**Braun Lift:** Connect the White wire (Lift wake up (GND) input to pin #1 of the 9-pin lift adapter connector.

Park Brake Connection

**Brown** – Connect this wire only if “key off” lift operation is desired. Connect this optional input to the OEM Park Brake switch (as shown) such that the switch is made when the Park Brake is set. Install a standard rectifier diode (RL202-TPCT-ND or equivalent) as shown in the Blunt Cut CAD drawing, to isolate the Parking Brake ground signal. Strip back some insulation off the White/Violet wire, solder the Brown wire on and tape or use heat shrink tubing. This connection is required if lift operation is desired when the vehicle ignition is OFF.
- Pin #1 — YELLOW (YELLOW) (Optional Shift Lock Input)
- Pin #2 — N/C
- Pin #3 — ORANGE (GREEN) (Vehicle Secure (12V) Output)
- Pin #4 — WHITE (WHITE) (Wake-up Signal (GND) input)
- Pin #5 — BROWN (BROWN) (Park Brake (GND) Input)
- Pin #6 — N/C
- Pin #7 — ORANGE (GREEN) (Jumpered to Pin #3)
- Pin #8 — GRAY (BLACK) (Lift Stowed (GND) Input)

Connect the 8 pin connector to the module

**ILISP515 Module**

Ensure all the harnesses are properly connected and routed, and are not hanging below the dash area. Mount the ILISP515 module as described on page one. Secure using screws or doubled sided tape.

Reconnect vehicle battery
Post Installation / Check List

ILISP515-A (Electric Lift Door)

The following checks must be made after installation of the system, to ensure correct and safe operation of the lift. If any of the checks do not pass, do not deliver the vehicle. Recheck all connections as per the installation instructions.

Begin the checklist with the vehicle in the following state:

- Lift Stowed
- Lift Door closed
- Park Brake set (PB)
- Transmission in Park (P)
- Ignition off (Key off). Wait until the module goes into “Sleep” mode (all panel LEDs OFF) which takes approximately 5 minutes.

1. Press the Lift Deploy Request button on the remote fob (electric door), or open door and press button on pendant (manual door). Verify the module wakes up and all 5 LED’s illuminate for approximately 2 seconds. The lower icon LEDs are backlit and will remain illuminated whenever the module is awake. The fob button may have to be held for 2 seconds or more to wake up the system.
2. Turn the ignition key on.
3. With Lift Door open, Park Brake set and transmission in Park, all LED’s except Lift Deployed and Shift Lock will be ON. Attempt to deploy the lift. Verify the lift deploys and all 5 LED’s are ON.
4. With the Lift deployed and Service Brake applied, verify the vehicle cannot be shifted out of Park.
5. Stow the Lift but leave door open.
6. With Lift Door open, Lift Stowed, and transmission in Park, release Park Brake. Verify all LEDs except Park are OFF. Attempt to deploy the lift. Verify Lift does not deploy with Park Brake released.
7. With Lift Door open, Park Brake set, Lift stowed, and Transmission in Neutral, verify Lift does not deploy.
8. With Lift Door open, Park Brake released and Service Brake applied, verify transmission will shift out of Park. Put transmission back into Park.
9. Turn Ignition Key OFF and repeat step 3. NOTE—this time the Shift Lock LED will be ON prior to Lift deployment.
10. With Lift Door open, Lift Stowed, transmission in Park, release Park Brake. Verify all LEDs except Park and Shift Lock are OFF. Attempt to deploy the lift. Verify Lift does not deploy with Park Brake released.
11. Close Lift Door and apply Park Brake. If not already, the module should go to sleep with all LEDs OFF in less than 5 min. since the countdown to sleep began at Step 9.

If any of the previous Post Installation tests fail, enter diagnostic mode.
Post Installation / Check List

Using Module LEDs
The module has 5 on-board LEDs which are used to convey information about the operation of the module. In the normal mode all LEDs are OFF, but they come ON in different situations:

**Operation Errors** - Under certain conditions the module LEDs are used to indicate errors which prevent continued operation. In this case, the Status LED will blink and depending which other LEDs are lit, the error is identified as follows:

- LED1 ON - Set-up error on output device.
- LED2 ON - Could not set up the CAN communication
- LED3 ON - Output error
- LED 2&3 ON - Lost CAN traffic

**VIN Errors** - If there is an error while getting the vehicle VIN, LEDs 1-4 will scroll 2 times then another LED will turn on to ID the error as follows:

- LED1 ON - Wrong Mfg.
- LED2 ON - Wrong chassis
- LED3 ON - Wrong engine
- LED4 ON - Wrong model year
- STATUS ON - Bogus VIN (e.g. all characters the same)
- No LEDs ON - No VIN response

**Status** - Diagnostic Mode can be entered by shorting the two pads marked “test” together on the circuit board. LED’s will scroll a couple times, then LED1 will “blink out” the current firmware version, then the LEDs will reveal system status as follows:

- LED 1 ON when Shift Lock enabled.
- LED 2 ON when transmission is in park.
- LED 3 ON when Park Brake is set.
- LED 4 ON when Lift is Deployed.
- STATUS LED ON indicates “Vehicle Secure” or “Lift enabled” meaning there is 12V on Pin 3 which connects to the lift.
- Cycling the key will exit Diagnostic Mode and all LED’s will be off.
ILISP515-A Lift Interlock

The ILISP515-A is a wheelchair lift safety interlock which will operate with the key on or key off. It will enable the lift when certain vehicle safety conditions are met, and will lock the transmission shifter in Park when the wheelchair lift is in use (not stowed). The ILISP515-A prevents the vehicle from being shifted out of park if the lift is not stowed.

Key On function:
1. The system will wake up when the fob or pendant deploy buttons are pushed.
2. With the module awake and the vehicle in Park, the (P) LED will be ON.
3. When the Park Brake is applied, the (PB) & Vehicle Secure LEDs will be ON.
4. When the Lift is deployed, all LEDs will be ON, and the transmission will be locked in Park.

Key Off function:
- Vehicle must be in Park before turning key off.
- With vehicle in Park and Park Brake applied, all LED’s except Lift Deployed will be ON.
- When the lift starts to deploy, the Lift Deployed LED will turn ON

Low Power Mode:
When the lift is stowed and ignition power is turned OFF, the vehicle CAN traffic will stop after a delay. Five min. after this traffic stops the system will enter a low current “sleep” mode of operation. To wake from “sleep” mode, turn the ignition on (key on) or press the lift deploy button on the pendant or fob (may have to be depressed for a second or two to wake the system). All display LEDs will turn ON for approximately 2 seconds as a “prove out”. The backlit LEDs will remain on as long as the module is awake.

Note: Do not leave the lift deployed when the vehicle is not in use. This will prevent the module from going into the low power mode and cause a current draw on the vehicle’s electrical system that could result in a dead battery after a time.
If the ILISP515-A fails any step in the Post Installation Test, review the installation instructions and check all connections.

If necessary, call InterMotive Technical Support at (530) 823-1048.

Blunt Cut Harness with Relay
If the ILISP515-A fails any step in the Post Installation Test, review the installation instructions and check all connections.
