C-BOM701-B (Blackout Module)
2018-2019 Dodge Charger Pursuit

Introduction
The C-BOM701 module has the ability to eliminate all exterior lighting to aid in covert operations. When activated, it will eliminate the parking lamps, reverse lights, service Brake lights, and the daytime running lights. Maximum speed can be set between 5-20 mph to automatically return brake lights for safety purposes.

Installation Instructions
Disconnect vehicle battery before proceeding with the installation.

WARNING
Disconnect the battery to prevent setting a check engine light.

It is the installer’s responsibility to route and secure all wiring harnesses where they cannot be damaged by sharp objects, mechanical moving parts and high heat sources. Failure to do so could result in damage to the system or vehicle and create possible safety concerns for the operator and passengers.
It is important to avoid placing the module where it could encounter strong magnetic fields from high current cabling connected to motors, solenoids, etc. Also avoid radio frequency energy from antenna’s or inverters next to the module. Finally, avoid high voltage spikes in vehicle wiring by always using diode clamped relays when installing upfitter circuits.
BOM Module

Find a suitable location to mount the BOM module. Locate the module in an area away from any external heat sources (engine heat, heater ducts, etc.). Do not mount the module until all post installation testing is complete and wire harnesses are routed and secure.

Data Link Harness (6-pin connector on module) The 2018-2019 Charger has a “Gateway” module connected to the OBDII connector. The BOM’s data link harness T’s into both an 8 pin and 12 pin connector on this gateway module.

1. Locate the vehicle’s Gateway module located next to the BCM and above the Park Brake.

2. Remove the 12-pin and 8-pin connectors from the Gateway module and plug in the 12-pin and 8-pin connectors from the Intermotive C-BOM701 Data Link harness. Plug the OEM 12-pin and 8-pin connectors into the mating connectors on the C-BOM701 Data Link harness.

3. Plug the free end of the Data Link harness into the mating 6-pin connector on the C-BOM701 module.

Blackout Input
- The Pink/Black wire (Pin 1 of the 4 pin connector) is used to enable Blackout Mode. The input requires a momentary push button (included) connected to +12V.

Blackout Status Output
- The Yellow wire (Pin 8 of the 12 pin connector) will be +12 volts Blackout mode is active. Connect to an LED. (not included)

Chime Mute Input
- The Green/White wire (Pin 5 of the 12 pin connector) is the input used to enable Chime Mute. The input requires a latching switch connected to Ground.
Blackout Mode

Introduction
- The Blackout module has the ability to eliminate all exterior lighting to aid in covert operations. This includes parking lamps, reverse lights, and Service Brake lights. A maximum ‘exit speed’ can be set to automatically return brake lights for safety purposes.

Blackout Input
- The Pink/Black wire (Pin 1 of the 4 pin connector) is used to enable Blackout Mode. The input requires a momentary push button (included) connected to +12V.

Blackout Status Output
- The Yellow wire (Pin 8 of the 12 pin connector) will be +12 volts when Blackout mode is active. Connect to LED with integral resistor.

Blackout Mode Operating Instructions:
To enter Blackout Mode. ALL preconditions must be met.
- Cluster Brightness must be turned Off. (Described in page 4)
- Speed must be below configured maximum speed (5-20).
- Momentarily apply +12V to Pink/Black wire to enter Blackout Mode (press momentary button).

Blackout Status Output will be +12v when Blackout Mode active.
To exit Blackout Mode any condition may be applied:
- Cluster brightness turned to the On position.
- Vehicle is moving above maximum speed.
How to turn OFF Cluster Backlighting

Rotate the left dimmer control to the extreme bottom OFF position. The interior lights will remain off when the doors are open.

**How to turn OFF Daytime Running Lights**

**US Vehicles only** (Optional on firmware 4.61 and above)

Touch the Settings hard key, then Touch “Lights” soft-key

Touch the Daytime Running Lights soft-key to change this display. When this feature is selected, the headlights will turn on whenever the engine is running. To make your selection, touch the Daytime Running Lights soft-key and select OFF.

The Daytime Running Lights will turn ON the first time the vehicle is shifted out of PARK, and remain ON unless the Parking brake is applied. Upon Returning to the PARK position, the DRL’s will turn OFF.
Post Installation / Check List
The following checks must be made after installation of the system, to ensure correct and safe operation of the lift. If any of the checks do not pass, do not deliver the vehicle. Recheck all connections per the installation instructions.

1. Turn ignition key on (to “Run”).
2. Cluster brightness must be turned Off.
3. Apply Blackout mode input (press momentary button).
4. Blackout output (Yellow) will be +12 Volts
5. Hold Service Brake and verify the Brake lights are disabled.
6. Disable Blackout Mode by turning the cluster brightness to the On position.
7. Hold Service Brake and verify the Brake Lights are ON.
8. Apply Blackout mode input (press momentary button).
9. Blackout output (Yellow) will be +12 Volts
10. Place transmission in Reverse and verify the reverse lights are not ON.
11. Disable Blackout Mode by turning the cluster brightness to the On position.
12. Verify that the Reverse Lights are On.

DO NOT PUT VEHICLE IN SERVICE IF IT DOES NOT PASS ALL OF THE ABOVE TESTS

Blackout Mode Diagnostics
Diagnostic mode is entered by shorting the two “Test” pads together on the module. The module provides diagnostic LEDs which illuminate according to the following table. To exit this mode, cycle the key. For diagnostics, momentarily short the two “Test” pads Three times. The Status LED will Flash 3 times repeatedly.

<table>
<thead>
<tr>
<th>LED #</th>
<th>Diagnostic Mode LED Descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Blackout Mode Active</td>
</tr>
<tr>
<td>2</td>
<td>VSS less than 15mph</td>
</tr>
<tr>
<td>3</td>
<td>Low Beams Off</td>
</tr>
<tr>
<td>4</td>
<td>High Beams Off</td>
</tr>
<tr>
<td>5</td>
<td>Park Lamps Off</td>
</tr>
<tr>
<td>6</td>
<td>DRL Off</td>
</tr>
<tr>
<td>7</td>
<td>Cluster Off</td>
</tr>

<tr>
<td>9</td>
<td>Speed Inhibit Enabled</td>
</tr>
</tbody>
</table>

Short pads together THREE times to enter diagnostic for Blackout mode.
Chime Mute

This feature will silence the following chimes from the interior of the vehicle when the door is opened:

- Lights-on reminder.
- Ignition or accessory on chime.

Chime Mute can be activated by either grounding the Green/White wire (PIN5 on 12 pin BOM connector) with a discrete switch (not provided in kit) or by simply turning off the cluster back lighting.

How to turn OFF Cluster Backlighting

Rotate the left dimmer control to the extreme bottom OFF position. The interior lights will remain off when the doors are open, and the BOM will mute the driver door related chimes.

Chimes Post Installation Test

Perform the following tests before mounting the module, to allow viewing of the diagnostic LED’s, if needed.

With vehicle in Park, Park Brake applied, and ignition in ACC:

1. Open Door and verify the audible Chime sounds.
2. Ground the Green/White (PIN 5) and verify the chime has stopped, or
3. Rotate the dimmer control to the OFF position, verify the chime has stopped.

Diagnostics

The BOM has a Diagnostic mode which is entered by shorting the two “Test” pads together. The amber status LED flashes to indicate Diagnostic Mode has been entered, and the other LEDs will now represent the status of the various outputs listed below.

To exit Diagnostic Mode and disable the LEDs, simply cycle the ignition switch.

<table>
<thead>
<tr>
<th>LED #</th>
<th>Diagnostic Mode LED Descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>Cluster Level Off</td>
</tr>
<tr>
<td>6</td>
<td>Chime Mute Input Active</td>
