

An ISO 9001:2015 Registered Company

Safe-T-Net STN752

(Standalone Harness)
2013 - 2019 Dodge Promaster

Introduction

The STN752 plugs into a vehicle's OBDII connector and acquires vehicle data which it translates and transmits to a third party device over a CAN network in accordance with the J1979 standard. The STN752 is completely compatible with all Intermotive products. This allows third party devices to be installed on vehicles which already have other Intermotive products and not worry about compatibility issues, while still acquiring necessary data without changes to the third party device. In addition, the STN752 provides a number of proprietary data parameters to third party devices that may not be available in other cases.

Installation Instructions

Be sure the vehicle's battery is disconnected before proceeding with installation.

It is the installer's responsibility to route and secure all wiring harnesses where they cannot be damaged by sharp objects, mechanical moving parts and high heat sources. Failure to do so could result in damage to the system or vehicle and create possible safety concerns for the operator and passengers. It is important to avoid placing the module where it could encounter strong magnetic fields from high current cabling connected to motors, solenoids, etc. Also avoid radio frequency energy from antenna's or inverters next to the module. Finally, avoid high voltage spikes in vehicle wiring by always using diode clamped relays when installing upfitter circuits.

- 1. Remove the lower dash panel below the steering column area and find a suitable location to mount the STN752 module. Locate the module in an area away from any heat sources. High temperatures can typically be caused by engine heat or hot air from heater ducts. Do not actually mount the module until all wire harnesses are routed and secure (last step of the installation is to mount the module).
- 2. Plug the free end of the Data Link harness into the 6-pin female connector on the STN752 module.

STN752 Harness

3rd Party connector

• The STN752 harness provides a 4 pin connector for interfacing to 3rd party devices. See pinout below. This 4 pin connector can also be plugged into the stub harness which provides the more common OBDII type, if desired.

Pin#1 Pink - J1939 CAN High Pin#3 Orange - J1939 CAN Low

Pin#2 Red—Battery Voltage Pin#4 Gray - Ground

STN752 OBDII harness

Operation:

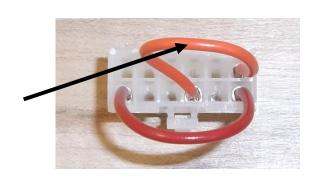

Optional OBDII Harness

which means that it does not transmit on the vehicle network via the OBDII interface. However, unique data that is not available passively may be required by some third party devices. In these cases, the STN752 must be put into active mode. Active mode is entered by cutting the "Active Messaging Jumper"

Orange wire installed on the 12-pin connector.

Tape or heat shrink both sides of the cut wire.

See the attached harness drawing for more jumper details. While in active mode, the STN752 will pass through certain requests to the vehicle network. See Table 4 for a description of data available in active and passive modes.

Active Mode Limitations

The STN752 is intended to be compatible with all Intermotive products. To accomplish this, it limits both the type and frequency of active messages transmitted on the vehicle network. This means that while in active mode not all messages will pass through to the vehicle network, and the rate at which they're passed through is limited. The maximum rate at which active messages are transmitted on the vehicle network is 40ms. Note that the STN752 will reply immediately to any active request if it has available data, but the data parameters will not update faster than 40ms. See Table below for list of supported services in active mode.

Inputs

The STN752 provides two general purpose, active high inputs. These inputs are read by the STN752 and their status is transmitted upon request. See the wiring diagram for input details.

Diagnostics

During VIN acquisition: Scrolling LED's indicate an error occurred while acquiring the VIN.

- LEDs scrolling in ascending order (LED1, LED2, LED3...) indicate an **invalid VIN** was captured. Verify that the chassis is supported by this product. If work was recently performed on this chassis, the VIN may have been cleared in the PCM.
- LEDs scrolling in descending order (LED10, LED9, LED8...) indicate **no VIN** was captured. Verify that the ignition is On, the Data Link Harness is not damaged, and that no other devices are installed on the OBDII port that might interfere with the STN752.

Diagnostic Mode: During normal operation, momentarily pressing the Red Test button puts the module into diagnostic mode. Momentarily pressing the button again exits diagnostic mode. While in diagnostic mode, the LEDs illuminate in the following manner:

- LED1: Passive vehicle data received
- LED2: Active response received from vehicle
- LED3: Active request sent to vehicle
- LED4: Request received from third party device
- LED5: Message sent to third party device
- LED6: Reserved
- LED7: Reserved
- LED8: Active Mode status
- LED9: Input 1 status
- LED10: Input 2 status
- Status: Heartbeat

J1979 Service \$01 - Request Current Powertrain Diagnostic Data

The description below refers to constructs used in the SAEJ1979 FEB2012 standard. Refer to this standard for further details. Service \$01 allows a third party device to request vehicle data. Table 4 lists the PID's available in Passive Mode. All other service \$01 PID's are available only in Active Mode. A number of PID's unique to the STN752 are available via service \$01. These are listed in Table 4.

The STN752 only allows one PID per service \$01 request.

Table 1 - Message Format

Size (Bits)	11	8	8	8	8	8	8	8	8
Field	ID	Data #0	Data #1	Data #2	Data #3	Data #4	Data #5	Data #6	Data #7

Table 2 - Service \$01 Request Format

Data Byte	Parameter Name	Hex Value	
#1	Request Powertrain Data Request Service ID	01	
#2	PID (See table below, and/or J1979DA)	XX	
PID value should be supported by this chassis.			

Table 3 - Service \$01 Request Response Format

Data Byte	Parameter Name	Hex Value
#1	Request Powertrain Data Response Service ID	41
	Data Record of PID:	
#2	PID	XX
#3	Data A	XX
#4	Data B	XX
#5	Data C	XX
#6	Data D	XX
Data B-D depend on selected PID value.		

Table 4 - Service \$01 PID's available in Passive Mode

PID	Description	Conversion
0x05	Engine Coolant Temperature (ECT)	A-40, Degrees C
0x0C	Engine Speed (RPM)	((A*256)+B)/4
0x0D	Vehicle Speed (VSS)	1 bit = 1 kph
0x11	Throttle Position (TP)	A*100/255, %
0x2F	Fuel Level (FLI)	A*100/255, %
	Park Brake (PB), Service Brake (SB), A/C (AC), ABS Event (ABS), Engine Oil Pressure Lamp (EOP), Malfunction Indicator Lamp (MIL),	 Data A: PB - On=\$1x, Off=\$0x, Unknown=\$3x SB - On=\$x1, Off=\$x0, Unknown=\$x3 Data B: AC - On=\$1x, Off=\$0x, Unknown=\$3x ABS - On=\$x1, Off=\$x0, Unknown=\$x3 Data C: MIL - On=\$1x, Off=\$0x, Unknown=\$3x EOP - On=\$x1, Off=\$x0, Unknown=\$x3
0xE1	Transmission Range (TR), Key Position (KEY),	 Data A: TR - 0=Park, 1=Reverse, 2=Neutral, 3=Drive, 7=Unknown Data B: KEY - 0 = Off, 1=Accessory, 2=On, 3=Crank, 7=Unknown Data C: LIGHTS - DRL On=\$1x, DRL Off=\$0x, DRL Unknown=\$3x
0xE2 0xE7	Odometer (ODO)*	Park Lamps On=\$x1, Park Lamps Off=\$x0, Park Lamps Unknown=\$x3 1 km per bit. 32-bit value, A is MSB, D is LSB

^{*} Only available in Passive mode in some applications.

J1979 Service \$03 - Request Emission-Related Diagnostic Trouble Codes

The description below refers to constructs used in the SAEJ1979 FEB2012 Standard. Refer to this standard for further details. Service \$03 allows a third party device to request Diagnostic Trouble Codes from all modules on a vehicle. **This service is only available in Active Messaging Mode**.

When the STN752 receives a Service \$03 request, it passes it through to the vehicle network. Any responses from vehicle modules are passed back through to the third party device as they are received.

The third party device should use the message described in Table 5 to request trouble codes.

Table 5 - Service \$03 Request Trouble Codes (refer to Table 1 for message format)

Data Byte	Parameter Name	Hex Value
#1	Request Powertrain Data Request Service ID	03

Phone: (530)-823-1048 Fax: (530)-823-1516 Page 6 of 9 www.intermotive.net products@intermotive.net STN752-110619-INS

J1979 Service \$09 - Request Vehicle Information

The description below refers to constructs used in the SAE J1979 FEB2012 and ISO 15765 standards. Refer to these for further details. Service \$09 allows a third party device to request vehicle-specific vehicle information. **The SNT430 only supports a VIN request, described below. This works in both Passive and Active Modes.** The VIN request using service \$09 makes use of multiple frame communication, as described in ISO 15765. The message flow is outlined below, but refer to ISO 15765 for further details regarding multiple frame communications

Table 6 - Service \$09 Request VIN

Data Byte	Data Byte Parameter Name	
#1	Request Vehicle Information Request Service ID	09
#2	Info Type - VIN	02

Table 7 - Service \$09 Response 1 from STN752

Data Byte	Parameter Name	Hex Value
#0	Multiple Message Communication: First Frame	10
#1	Data Length	14
#2	Request Vehicle Information Response Service ID	49
#3	Info Type - VIN	02
#4	Number of Data Items	01
#5	VIN Character 1	XX
#6	VIN Character 2	XX
#7	VIN Character 3	XX

Table 8 - Service \$09 Response 2 from STN752

Data		_
Byte	Parameter Name	Hex Value
#0	Consecutive Frame: Sequence Number 1	21
#1	VIN Character 4	XX
#2	VIN Character 5	XX
#3	VIN Character 6	XX
#4	VIN Character 7	XX
#5	VIN Character 8	XX
#6	VIN Character 9	XX
#7	VIN Character 10	XX

InterMotive Inc. 12840 Earhart Ave. Auburn, Ca. 95602 Phone: (530)-823-1048 Fax: (530)-823-1516 Page 7 of 9 www.intermotive.net products@intermotive.net STN752-110619-INS

Table 9 - Service \$09 Response 3 from STN752

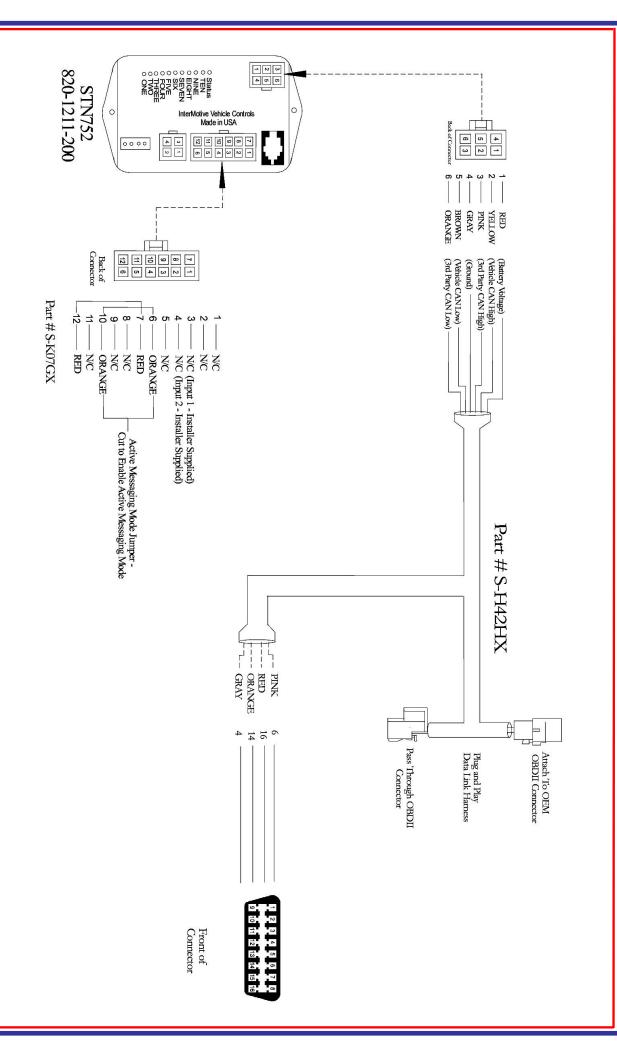

Data Byte	Parameter Name	Hex Value
#0	Consecutive Frame: Sequence Number 2	22
#1	VIN Character 11	XX
#2	VIN Character 12	XX
#3	VIN Character 13	XX
#4	VIN Character 14	XX
#5	VIN Character 15	XX
#6	VIN Character 16	XX
#7	VIN Character 17	XX

Proprietary Service \$22 - Read Parameter by identifier

Some vehicles support service \$22, which is used to request proprietary vehicle data. **This service is only available in Active Messaging Mode.**

When the STN752 receives a service \$22 request addressed to a module ID greater than \$700, it passes it through to the vehicle network. Any responses from vehicle modules are passed back through to the third party device as they are received.

Phone: (530)-823-1048 Fax: (530)-823-1516 Page 8 of 9

If the STN752 fails any step in the Post Installation Test, review the installation instructions and check all connections.

If necessary, call

InterMotive technical support @ (530) 823-1048.
