

Now InterMotive's Door Lock Module secures non-OEM doors on more chassis

AUBURN, CALIFORNIA – February 17, 2021

InterMotive Vehicle Controls, a leading manufacturer of electronic control systems, has recently added Ford E-Series and Transit chassis applications to its popular Door Lock Module, a security product that enables users to remotely lock/unlock all doors on the vehicle using the OEM key fob, a lock switch or keypad.

The system works on both OEM and aftermarket doors, including the patient compartment for ambulances. Door locks can be triggered with the key in or out of the ignition.

"No more hassling with multiple locks or keys," says Greg Schafer, President of InterMotive. "We've made complete chassis security easy so users can focus on more important things."

Door Lock Module requires minimal connections to OEM wiring and was originally released on the Ford Super Duty. More chassis applications are coming soon.

InterMotive products can be purchased from InterMotive's master distributor, LGS Group.

###

InterMotive Vehicle Controls provides commercial safety and performance optimization products. Our plug and play electronic control systems leverage a vehicle's own data networks to enhance its functions in new ways. We specialize in custom solutions for ambulance, fire truck, law enforcement, work truck, transit and paratransit, school bus, RV and personal-use mobility industries.
