

New InterMotive product auto-charges batteries helping RVers live the dream

AUBURN, CALIFORNIA – February 10, 2021

InterMotive Vehicle Controls, a leading manufacturer of electronic control systems, has developed eVolution, a secure engine stop/start product designed to automatically charge the batteries while the RV is parked and the electrical systems are in use.

eVolution, designed for Class B and C recreational vehicles, manages the charging of OEM and auxiliary batteries using customizable conditions to stop and start the engine. A high idle function minimizes the charging time and internal safeguards prevent overcharging and ensure safe operation.

It also includes a key-out mode which provides security by allowing the key to be removed from the ignition. The system can be activated using the OEM key fob from outside the vehicle.

“eVolution is designed to allow customers to enjoy their RV amenities worry-free without constantly having to check if the batteries are getting low, says Greg Schafer, President of InterMotive.

The system is easily installed with plug and play connections to the OEM chassis. eVolution is currently available for the RAM ProMaster and Ford Transit. For more details, contact InterMotive’s master distributor, LGS Group, at 775-831-2002.

###

InterMotive Vehicle Controls provides commercial safety and performance optimization products. Our plug and play electronic control systems leverage a vehicle’s own data networks to enhance its functions in new ways. We specialize in custom solutions for the work truck, transit and paratransit, law enforcement, ambulance, fire truck, school bus, RV and personal-use mobility industries.
