

## InterMotive upgrades its manufacturing process to boost capacity and strengthen quality

**AUBURN, CALIFORNIA** – July 20, 2021

InterMotive Vehicle Controls, a leading manufacturer of electronic control systems, has enhanced its circuit board manufacturing process and added new staff to support the additions.

A second JUKI machine doubles the circuit board output on InterMotive's SMT (surface mount technology) line. An automated optical inspection machine now handles circuit board quality control in mere seconds, adding an extra level of quality analysis.

These enhancements to InterMotive's manufacturing process further streamline production and strengthen quality, ensuring customers continue to receive exceptional products in a timely manner.

Tracy Weatherfield, VP of Operations at InterMotive, elaborates, "The new additions allow us to prepare for significant growth and flexibility while upholding the high quality levels that our customers depend on."

###

*InterMotive Vehicle Controls provides commercial safety and performance optimization products. Our plug and play electronic control systems leverage a vehicle's own data networks to enhance its functions in new ways. We specialize in custom solutions for the work truck, transit and paratransit, law enforcement, ambulance, fire truck, school bus, RV and personal-use mobility industries.
