

InterMotive levels up its auto-charging system for battery protection

AUBURN, CALIFORNIA – April 26, 2022

InterMotive Vehicle Controls, a leading manufacturer of electronic control systems, has made enhancements to its latest idle mitigation product designed to automatically charge the batteries while equipment is in use.

eVolution+TM prevents battery drain by controlling OEM and auxiliary battery charging activity using customizable conditions to stop and start the engine.

Features include a programmable high idle function to minimize charging time, HVAC control functions to keep the vehicle comfortable and configurable outputs to enable equipment or an alarm, among other options. The system also offers anti-theft features with key-out mode and shift lock, plus automatic door lock controls.

A mobile app is currently in development for eVolution+ so users can custom program settings, view real-time vehicle data and track fuel savings.

The eVolution+ system optimizes performance for work truck, ambulance and law enforcement vehicles and is available for the GM Tahoe/Suburban, Ford E-series and Ford PIU. Other truck and van chassis applications are coming soon. For more details, contact InterMotive's master distributor, LGS Group, at 775-831-2002.

###

InterMotive Vehicle Controls provides commercial safety and performance optimization products. Our plug and play electronic control systems leverage a vehicle's own data networks to enhance its functions in new ways. We specialize in custom solutions for the work truck, law enforcement, ambulance, fire truck, transit and paratransit, school bus, RV and personal-use mobility industries. To learn more, call 800-969-6080 or visit www.intermotive.net.
